Product Summary

Enphase C250 micro inverter.

Product Description

The Enphase C250 microinverter supports 480V three-phase systems with 72-cell modules, so it's a perfect fit for large commercial installations.

Enphase C250 MicroInverter Overview...

- Output Power: 250W AC - Commonly used module pairing - input power:

210-350W - MPPT Range: 27 - 48 V - Operating Range: 16 - 60 V - Best-in-class
96.5% CEC Efficiency - Integrated Ground, eliminating the need for a copper
wire or WEEB - CSA Listed per UL 1741/IEEE1547 - 10- or 20-year warranty
options

The Enphase Difference

Enphase is on a mission to bring solar energy to the next level, one where it's ready to meet the energy demands of an entire globe.

More Power From Your Solar Panels

Enphase Microinverters get more power from the same solar panels. This means greater savings & value from your system. Each microinverter connects to a single solar panel. Unlike other types of solar inverters, if there is a shaded, dirty, or problem panel, the rest of the system keeps running smoothly. The result is increased system power yield of 3-12% over standard string inverters (according to multiple independent studies incorporating a variety of shading/soiling issues).

The Enphase Envoy shows you the status of all panels in real time.

Solar You Will Love

Every part of the Enphase system is designed to have a minimal impact on your building. Wiring and equipment stay out of sight, and the low voltage AC design improves safety.

Want to start with only a few solar panels & expand in the future?

Standard string inverters require specific string sizes of panels, and have limitations on how the system can be expanded. But Enphase MicroInverters let you install as many panels as you wish, in multiple sections. The ultimate solar power system design flexibility.

Reliability, Inside & Out

Enphase products are designed to deliver more power, with less maintenance. The proof is in the longest warranties on the market. Up to 20 years.
