### Product Summary

All you need is a 14x6' or 28x6' patch of roof, and you could be saving up to 30% on your electric utility bills. The MyGrid 2.x grid-tie solar power system package comes with everything you need including premium solar modules, racking, utility interface, and web-based system monitoring.

FREE shipping to most Canadian locations.

### Product Description

Ready to bury the dinosaur? All you need is a 14x12' or 28x6' patch of roof, and you could be saving up to 30% on your electric utility bills. But, more than that, you'd like a system that is simple to install, is built to last, and can be expanded

easily in the future. Well, you've come to the right place.

The MyGrid 2.x system package includes all your core system components: premium solar modules, racking, utility interface, and web-based system monitoring. You'll not only have an attractive system with a 20+ year warranty and 40+ year life expectancy, but you will be able to see exactly how it is performing anytime you wish, and can expand it for even more green energy at any time.

FREE shipping is included to most Canadian locations.

MyGrid 2.x Features...

**Leading European solar modules from [REC](#)] 8 x [290W REC Twin Peak 2](#)] solar modules**

Got trees? REC's design is your best option

Maximum power performance for any installation

Unique split-panel design minimizes the effects of shading & soiling

REC is in the top-5 on the [solar scorecard](#)] rankings year-after-year

A Norwegian company, and one of Europe's top brands

**The leading Grid-Tie Microinverters from [Enphase](#)] 8 x [Enphase IQ](#)] micro inverters**

**1 x [Enphase Envoy-S](#)] monitoring system with web**

Maximum power yield for any installation

Simplified AC wiring that makes any electrician happy

Easily expanded in the future without any re-engineering

Web-based monitoring system - track performance at the module-level

Fully integrated premium racking solution from [Ironridge](#)

Superior aesthetics: Black or silver, finishes nicely at the edge of the solar module

Simple & quick installation with fantastic lightweight design

Built-in cable management

**Full support and guidance for a fast, trouble-free installation**

All you need is...

**1. Choose the roof attachment you will need for your home**

We strongly recommend [Quick Mount PV](#)]. Superior design, 20-year warranty,

approval from all major roofing manufacturers, full list of roofing certifications, and solutions for any roof type.

For west coast homes with composite shingle roofs, we recommend the Classic.

For less wet locations, the **E-Mount** is ideal.

[Cedar shake](#)], tile, and low-slope solutions are also available.

## **2. Choose your favourite local roofer, general tradesman, and electrician**

Help with the permits, installation, and utility interface steps. Or do it yourself and save.

Interior home wiring for run from roof penetration box to main (or sub) service panel is not included, so hiring trades can help to ensure that the job is done right.

A dedicated 240VAC breaker is required on your main (or sub) service panel (breaker not included).

MyGrid 2.x Specifications...

Rated Power: 2.32 kW

Expected annual production - varies from location to location.

Most lower-latitude Canadian locations with decent southerly exposure will generate

**up to 2,500 kWh per year.**
