### Product Summary

PowerFilm's most powerful edition of their popular pocket solar AA battery charger. This model offers 6 panels of the PowerFilm cells to provide 50% more power and faster charging performance than other models. Charges 2 or 4 AA batteries from daylight.

### Product Description

The Powerfilm AA solar charger is the smallest, lightest AA solar charger utilizing

Powerfilm's leading thin film solar technology to provide maximum power in any daylight condition.

This small, light solar charger packs more charging power than any of the flimsy plastic chargers you might find on sale at the big box stores. This kit provides over 2 Watts peak output, enough to charge a set of two high-capacity batteries in less than one day. Compare this to the less than 0.5 Watt output of the small AA/AAA solar chargers which would take up to 3 days to charge the same high capacity batteries.

**NOTE:**

If you see a small solar charger specifying that it charges batteries in 4 hours, they are talking low-capacity batteries, with 5 peak-sun hours of daylight (basically all day in the summer). they are not as sensitive, or powerful as this Powerfilm product. PowerFilm solar modules are MADE IN THE USA, and are particularly good in partial shade & low-light conditions. Ideal for applications where you may not be able to have the panel exposed directly to sunlight all the time (ie strapped to your pack). Take one on your next camping or hiking trip to keep your camera or GPS batteries charged.

Specifications

Performance:

2.16 Watts

600mA @ 3.6V

Premium Eneloop batteries are included

Charges NiMh AA:

2 : 3.3 hours full sun

4 : 6.7 hours full sun

(est 1-day for mobile applications to charge 2 high-capacity batteries)

Charging & completed indicator lights

Dimensions:

5.5 x 3.3 x 1.4"

14 x 8.5 x 3.5cm

Deployed...

31.5 x 5.5"

80 x 14cm

4.18oz / 119g

Warranty: 1-year

**Made in the USA INCLUDED: set of 4 premium Eneloop NiMh rechargeable batteries. A \$17.99 value!**
