Product Variants

- Metal Roof Attachment Clamp by S-5! - Standard ()
- S-5-E Metal Roof Attachment Clamp by S-5! - Mini ()

Product Summary

The S-5-E clamp is designed specially for double-folded standing seam roof profiles

having the appropriate dimensioning. Its simple design and size make it perfect for use with solar. Although a bit smaller and less expensive than the S-5-U, for these profiles, the S-5-E is just as strong.

Product Description

The S-5-E clamp is designed specially for double-folded standing seam roof profiles having the appropriate dimensioning. Its simple design and size make it perfect for use with solar. Although a bit smaller and less expensive than the S-5-U, for these profiles, the S-5-E is just as strong. Installation is as simple as setting the patented round-point setscrews into the clamp, placing the clamp on the seam, and tightening them to the specified tension. Then, affix ancillary items using the M8 bolt provided with the product.

The S-5-E and S-5-E Mini clamps are each furnished with set screws & M8 bolt hardware. Each box also includes a bit tip for tightening setscrews using an electric screw gun. A structural aluminum attachment clamp, the S-5-E is compatible with most common metal roofing materials

excluding copper. All included hardware is stainless steel.

The S-5-E and S-5-E Mini clamps have been tested for load-to-failure results on a variety of double-folded standing seam roofs, from leading manufacturers of panels and panel-forming machines. The independent lab test reports found on our website at www.S-5.com prove that S-5!® holding strength is unmatched in the industry.

S-5-E Mini Clamp

The S-5-E Mini is a bit shorter than the S-5-E and has one setscrew rather than two. The mini is the choice for attaching all kinds of rooftop accessories: signs, walkways, satellite dishes, antennas, rooftop lighting, lightning protection systems, solar arrays, exhaust stack bracing, conduit, condensate lines, mechanical equipment—just about anything!*
